

Project Charter

Team 14

January 19, 2017

Team Members

Kate Wang, Dominic Valentine, Wilson Husin, Jiho Choi, Kyle Leaf

Problem Statement

Students have trouble finding people in the same course to study with, and they need an application that will connect users with other students taking the same course for study buddies.

Project Objectives

Users will be able to:

- choose channels for the courses they are participating that semester.
- create a channel for their course if it does not already exist.
- access public chat of the courses they are registered in.
- see their classmates from the public channel of the course.
- create a subgroup chat in a channel based on topics (e.g. "Homework 2").
- create public events.

Stakeholders

- Users: Students who want to find people to study with
- Product Owners: Kate Wang, Dominic Valentine, Wilson Husin, Jiho Choi, Kyle Leaf
- Scrum Master: Kate Wang
- Developers: Kate Wang, Dominic Valentine, Wilson Husin, Jiho Choi, Kyle Leaf

Deliverables

- A frontend web application that will run on popular web browsers to display user requested information.
- A backend database system to store and retrieve user information and handle the accounts.
- A mobile-friendly version of the application.
