Special Information

1. Host server sleeps after 30 minutes
 - a. We are hosting the app in Heroku: Cloud Application Platform. Current hosting service goes to sleep mode after 30 minutes of request silence.
 - b. You may have to wait extra 2 or 3 seconds to wake up the app server.
2. In case of app crashed
 - a. It will happen in a very rare case, but in case of the app crashes due to seeded defects, hosting server will deploy the newly compiled app again in 30 minutes. Or you can contact Wilson Husin whusin@purdue.edu to manually deploy.
